

TGT - Strives for Innovative Technologies and Reliable Measures

TGT was honored to be awarded “Innovative Data Centre – Gold ” by CAHK in 2019. The award is in recognition of TGT’s remarkable commitment to excellence and innovation with our data centre.

TGT Hong Kong Data Centre 2 (TGT HKDC2), which is located in Tseung Kwan O, adopts landfill gas absorption chiller which utilises landfill gas from the nearby Tseung Kwan O landfill for space cooling and turning waste into energy. The Tseung Kwan O South East New Territories (SENT) Landfill Gas Utilisation Project implemented by Towngas, is the largest landfill gas conversion facility of its kind in Asia. It reduces naphtha consumption by 13,000 tonnes a year and is projected to offset 56,000 tonnes of carbon emissions each year, which is equivalent to 2.4 million trees’ CO2 absorption per year.

As an industry pioneer, TGT has always been devoted to drive industry development by advocating innovative applications for telecommunications and gas industries.

Competitive Edge

Networked Data Centre

Form a data centre cluster that connects Hong Kong and major economic areas in the mainland, offering comprehensive operation management and quality services

Excellent and Professional Management

Compliance with ISO9001, ISO14001, ISO20000-1, ISO27001, CSA Star, FISC, GB50174-2018 and HKSAR Government’s Level II Security Guidelines

World Class Infrastructure

Fully comply with the TIA-942 Tier 3+ international standard

Carrier-neutral

Commit to offering access to major telecommunications carriers
